PROFILE

HND graduate with practical experience in Laravel, PHP, HTML, CSS, JavaScript, React, and C#, including a 6-month internship developing responsive, user-friendly web applications. Skilled in Laravel and PHP, with a strong focus on building scalable and maintainable solutions. Seeking an Associate-Level role to apply my expertise, contribute to team projects, and continue growing professionally in web development

WORK EXPERIENCE

web Developer

NETIT Technology

2025- Present

Worked as a Full-Stack Developer, specializing in Laravel and PHP, developing dynamic and responsive web applications. Involved in designing, coding, testing, and deploying web solutions, integrating front-end technologies (HTML, CSS, JavaScript, React) with back-end systems. Collaborated closely with the team to implement scalable, user-friendly features, optimize application performance, and ensure maintainable and high-quality code. Gained hands-on experience in full-stack development workflows, database management, and problem-solving in real-world projects.

PROJECTS

Jewelry System

Developed a Jewelry Management System using Laravel, PHP, MySQL, and Bootstrap, featuring secure user authentication (login and registration) and role-based access control. Implemented separate Admin and Super Admin dashboards to manage jewelry products, categories, users, and system operations efficiently. Designed responsive and user-friendly interfaces using Bootstrap, and handled backend logic, database relationships, and CRUD functionalities through Laravel. Focused on data security, system scalability, and clean code practices, gaining hands-on experience in full-stack web application development.

Property System (realworld)

Developed a real-world Property Management System using Laravel and PHP, with UI styling implemented through inline CSS. Implemented Laravel Authentication to enable property owners to register and securely log in to the system. Designed a dedicated Super Admin dashboard to oversee and manage the entire platform. Built an Owner dashboard with a "Post Your Ad" feature, allowing owners to add, edit, delete, and manage property listings efficiently. The system supports complete property management workflows, reflecting real-world use cases, with a strong focus on usability, security, and maintainable backend logic.

Project Management System (realworld)

Developed a Company Management System using Laravel and PHP to streamline and manage internal company operations efficiently. The system was designed to handle company workflows, service activities, and financial transactions, including tracking and managing all payments received. Implemented structured backend logic and database management to ensure accurate recording of payment details, transaction history, and operational data. Focused on building a reliable, secure, and scalable system that supports effective company management and reflects real-world business requirements.

Property Management services System (Landing page)

I created a website for a Property Management Service System that includes details such as price, size, and location of apartments and housing units, helping users easily find and manage properties.
Technologies - HTML, CSS , JavaScript
